

India's Progress Against TB

India continues to make significant progress in reducing TB incidence through sustained public health interventions and community participation.

With strengthened screening, early diagnosis and treatment support, the country remains committed to accelerating efforts towards TB elimination.

“

According to the World Health Organization's TB report, India has achieved a remarkable **21% reduction in TB incidence**, compared with a global reduction of 12%.

This clearly demonstrates that India is advancing at a significantly faster pace.
