

ORS Day 2026: Awareness Programme on Diarrhea Management and ORS Use

The Department of Pediatrics at AIIMS Bibinagar celebrated ORS Day on 29th July 2026 to raise awareness about diarrhea management. The event focused on educating both parents and children about the critical role of Oral Rehydration Salts (ORS) in preventing dehydration. Through interactive sessions in the outpatient and inpatient departments and the pediatric intensive care unit, the doctors and nursing officers demonstrated the correct method of preparing and administering ORS. Parents learned to recognise early signs of dehydration and understood when to seek medical help. Everyone participated in engaging activities that emphasised hygiene practices like handwashing. This successful initiative empowered families with practical knowledge, highlighting ORS as a simple, cost-effective, and life-saving intervention against childhood diarrhea.
